
Ubiquitous QuickBoot Surpasses 100 Million Units Shipped

Fast Boot Solution for Embedded Linux® and Android™ Experiencing Growing Demand

TOKYO --February 10, 2026-- Ubiquitous AI Corporation (TSE:3858) announces that its Linux and Android fast boot solution Ubiquitous QuickBoot has shipped over 100 million licenses worldwide as of the end of December 2025.

Since its launch in 2010, QuickBoot has been incorporated into high-volume, mass-produced devices, including broad adoption in automotive applications. By providing immediate startup and device operation after power-on, QuickBoot has been seen widespread deployment across consumer, industrial, and automotive markets.

Resolving Startup Delays in Advanced Embedded Systems

Modern embedded devices have evolved rapidly, incorporating multi-screen environments, advanced graphics, and AI functionality. As this new functionality is integrated, Linux and Android systems tend to become larger and the time required to start the system from a power off state becomes a burden. Furthering this problem is the widespread adoption of secure boot technologies -used to verify software integrity during startup- which has led to increased boot time and complexity. QuickBoot can resolve these challenges and further provide a solution for devices to support zero standby power, longer battery life and reduced carbon emissions.

Ubiquitous AI has updated its website to help customers learn more about QuickBoot:
